Course Project: Milestone 4

07/31/21

### **Process**

I wanted to represent. I thought a pie chart would be a good way to show the difference in proportions between automobile deaths and automobiles. By narrowing this down further to a specific popular airline such as United, you can get a much larger difference compared to automobiles. This percentage decrease should be noticeable in an infographic format. For colors, I stuck with a consistent red being negative and green being positive. Since we are trying to portray automobiles as less favorable than airplanes, automobiles and their numbers are in red.
